Anywhere and everywhere can be a farm — all it takes is one small seed and someone to plant it.

Use *Anywhere Farm* in your classroom to cultivate an interest in sustainable living while learning about plants of all kinds.

# Anywhere Farm

Provide a variety of seeds for the children to choose from — sunflower, grass, pumpkin, and radish. Ask each student to draw a picture of what they think their seed might become. Talk about the parts of the plant — roots, stem, leaves, and so on.

Have students bring in something from their home recycling bin in which to plant their seed. Encourage them to be creative in their choices.

After planting the seeds and discussing the importance of sunlight and water, have students draw a timeline beginning with the date on which they planted their seed. They can use the timeline to indicate the first sprout, rate of growth, number of sunny days, and more.
